- *Reduced irregular skin pigmentation.*
- *Softening of fine lines and wrinkles.*
- *Reduced signs of age and sunspots.*

Frequently asked questions about LightWave Treatments:

Q: How often should treatments be administered?

A. The initial treatment package should be administered 20-24 minutes once a week for a total of 6 treatments.

Q. How soon will I see results after the first treatment?

A. Most clients will experience a change in skin appearance after the first treatment. Their skin will have a smoother and healthier skin tone. In the days and weeks following the first treatment, the skin's appearance will continue to improve as new capillary growth, which leads to better circulation, and collagen production increase.

Q. Do any maintenance treatments need to occur after the initial set of treatments?

A. Yes. At least once monthly a LightWave treatment should be administered.

Q. Are there any side effects from the treatments?

A. There are no known harmful side effects from the treatment. Some clients may experience a slight flushing of the skin and some mild discomfort but this should decrease over a few hours following the treatment. This is due to increased circulation to the areas being treated, which has therapeutic benefits as it assists to flush toxins and other wastes from the skin cells and lymphatic system.

Q. What other areas can be treated?

A. The LightWave is most effective in treating the face, neck and chest areas.

However, it can be used to treat other areas of the body as well.
